Professional Summary

Senior Full Stack and Backend Software Engineer with over 5 years of industry experience designing and deploying scalable microservices, secure REST APIs, and modern data-driven web platforms. Proficient in Java, Spring Boot, Python, and SQL databases with a strong foundation in cloud deployment, CI/CD pipelines, and Agile development workflows.

Technical Skills

Programming Languages: Java, Python, SQL, JavaScript, TypeScript, Bash

Frameworks & Backend: Spring Boot, Django, FastAPI, Flask, Hibernate, Microservices, REST APIs

Databases & Caching: MySQL, PostgreSQL, Redis, MongoDB

DevOps & Cloud: Docker, Kubernetes, AWS, Git, GitHub Actions, CI/CD, Linux, Maven

Methodologies: Agile, Scrum, Test-Driven Development (TDD), System Design

Work Experience

Senior Software Engineer | CloudScale Solutions (2022 – Present)

• Architected and developed high-throughput Java microservices using Spring Boot and REST APIs, reducing service response latency by 35%.

• Designed and optimized relational database schemas with MySQL and PostgreSQL, managing large-scale persistence layers and query indexing.

• Led team version control and collaboration workflows using Git and automated testing pipelines in GitHub Actions CI/CD.

• Containerized distributed applications using Docker and orchestrated multi-region deployments on AWS infrastructure.

Backend Software Engineer | Apex Innovations (2019 – 2022)

• Developed robust backend web applications and RESTful APIs using Python, Django, and Java Spring frameworks.

• Integrated Redis caching layers to reduce MySQL database load during high concurrency traffic surges.

• Collaborated in cross-functional Agile engineering teams, conducting code reviews and maintaining technical documentation.

Education

Bachelor of Science in Computer Science | University of California, Berkeley (Graduated 2019)

Relevant Coursework: Data Structures, Distributed Systems, Database Management Systems, Software Engineering.

Key Projects

• **Enterprise Microservices Gateway:** Designed a modular API gateway using Java and Spring Boot with JWT authentication and rate limiting.

• **Distributed Task Queue:** Engineered a scalable task processing pipeline using Python, Redis, and MySQL with Docker containerization.
